

Yashab Narang

Software Engineer | Backend and Full Stack

ynara50@gmail.com | <https://yashab.com/> | [linkedin.com/in/yashab](https://www.linkedin.com/in/yashab) | (805) 223-1379 |

Open to Relocating to New York, San Francisco, and Washington DC

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of proven experience in the development and deployment of features utilizing C#, Angular, MS SQL Server, frontend and backend technologies and software development best practices. Demonstrated ability to communicate, execute project management and utilize creative problem-solving skills to guide products through the software development lifecycle in agile, collaborative and fast-paced environments.

TECHNICAL SKILLS

Software Engineering: Debugging, Object Oriented Programming, Testing, Algorithms, Front-End, Back-End, Microservices, Relational Databases, UX, SDLC

Programming Languages: C#, Angular, Typescript, Python, HTML, CSS, XML, JavaScript

Tools: Git, Docker, Amazon Web Services, AWS, SMTP, GitLab, REST

Databases: Microsoft SQL Server, MySQL, SQL, Oracle, Database Management

AI/ML: OCR validation, AI-assisted workflow automation

PROFESSIONAL EXPERIENCE

Software Engineer | Axon Enterprise

November 2024 - Present

- Develop and maintain data migration helper packages in C#, using SQL to map legacy source schemas, to migrate digital evidence from legacy systems and third-party vendors into Axon's Evidence.com platform
- Build and enhance data integration and transformation logic for migrating petabytes of digital evidence, ensuring accurate, complete, and reliable ingestion during customer migrations
- Work closely with Data Solutions Engineers to execute migrations, validate results, and ensure all evidence is transferred correctly without data loss or corruption
- Participate in peer code reviews and release workflows using Azure DevOps, ensuring code quality, correctness, and adherence to team standards

Software Engineer | Yardi Systems

June 2022 - November 2024

- Reduced invoice processing time 80% by developing web application with scalable automation in Angular and MSSQL, working alongside the AI team to integrate and validate OCR-based data extraction
- Facilitate efficient data exchange between in-house products by creating and maintaining 3+ RESTful APIs
- Improve web app usability by redesigning and coding 100% of front-end architecture and UI utilizing C# and .Net
- Enhance system performance and reliability by testing, executing code reviews, debugging and implementing solutions for 10+ problems weekly to ensure continuous integration of solutions
- Decrease response time for stakeholders 99% by implementing SMTP for instant communication, documentation, and confirmation of invoice receipt
- Designed and modified database schema daily, adding new tables, columns, and indexes in MS SQL Server, to support evolving invoice automation requirements
- Ensure continuous improvement of software solutions by working in collaboration with cross-functional QA and DevOps teams, writing clean code and debugging issues

Software Engineer Intern | Yardi Systems

May 2017 - August 2018

- Optimized data organization and increased efficiency of data processes 25% by developing a database web application utilizing Java and MySQL
- Simplified vendor discovery for clients and enhanced searches by executing integration of Oracle queries
- Improved reporting and data analysis by creating 3+ new database reports weekly and updating old reports

EDUCATION

Bachelor of Science in Computer Science | California State University Fullerton | 2020
